

40' x 20' x 10' Type 2 military duplex magazine

Multi-Plex Explosives Storage Magazines

For large storage applications consider Armag Corporation Type 2 multi-plex explosives storage magazines. Attaching sections on-site provides capability of storing unlimited amounts of ordnance and ammunition all under one roof at less cost than multiple magazines.

Large Scale Storage Just Got Easier

The multi-plex is constructed of several magazine units which are constructed at our facility and assembled on-site in a matter of hours. The multi-plex explosive storage magazine has a clear span interior and our truss system and roof support is engineered to withstand heavy loads. Traditional concrete construction of ammunition and explosives storage magazines is much more expensive and very time consuming. Armag Type 2 magazines eliminate the hassles associated with regulatory construction requirements and construction delays.

Features

The 1/4" steel exterior is commercially sandblasted and painted with a high solids urethane top coat. The interior is lined with kiln dried military grade hardwoods and our floor systems are heavily reinforced. Many options are offered including explosion resistant lights and HVAC, interior divider walls, shelving, and more.

Advantages

- Quick solution for long term large scale storage needs
- Cost effective solution when compared to conventional construction
- Compliant with all ATF and DoD Type 2 specifications
- Customized to meet your unique application

Contact the professionals at Armag Corporation and put our 40 years of Type 2 magazine construction to work for you.
